| <i>Enhanced Flexural Properties of Jute/PLA Biocomposites and Biobards by Improvement of the Interfacial Strength</i> Donghwan Cho, Kumoh National Institute of Technology | 59 |
| <i>Effective Technique for Injection Molding Using Micro-fibrillated Bamboo Fiber</i> Chiaki Tanaka, Graduate School of Doshisha University | 77 |
| <i>Advanced Composite Materials for Defense</i> Byung IL Yoon, Agency for Defense Development | 89 |
| <i>Novel Applications of Composite Structures to Robots, Machine Tools and Automobiles</i> Dai Gil Lee, Korea Advanced Institute of Science and Technology | 107 |

Fabrication and Application of Nanohoneycomb Structures

- Woonbong Hwang, POSTECH 125

Fiber Optic Smart Monitoring of Various Structures

- Ki-Soo Kim, Hongik University 157

Effect of Alkaline Treatment on Strength and Adhesion of Bamboo Fibers

- Nguyen Huy Tung, Hanoi University of Technology 185

Highly Functional PLA composites Used for Electronic Products

- Masatoshi Iji, NEC Corp. 193

Application of cashew nut shell liquid as a curing agent for epoxy resin

- Chang Woon Nah, Chonbuk National University 213

Development of Long Jute Fiber Reinforced Thermoplastic Pellets for Injection Molding

- Takayasu Fujiura, Kobe Steel Ltd. 233

Development of Jute Fiber Composites for Advanced Applications

- Byung Sun Hwang, Korea Institute of Machinery and Materials 247
